

About me

Curious and open minded, I enjoy facing challenges and gain new skills. After completing a first study program, I have finally found my way in IT, more precisely in the field of data and development.

My biggest strength comes from the diversity of my experiences, from project management to development and web analytics. Thanks to that, I am able to understand business needs and to translate them into technical language

Today I am looking for a position that will allow me to evolve towards key positions while keeping my technical skills up to date. My goal is to become a multi-specialist to adapt easier to future challenges
